

AMENDMENTS TO THE SPECIFICATION

Please replace the Abstract with the following amended Abstract.

A child-resistant package includes a container having a finish with an open end, ~~at least one~~ external thread, ~~at least one~~ stop lug projecting radially outwardly from the finish, and a closure having a base wall, a skirt with ~~at least one~~ internal thread for engagement with the thread on the container finish, ~~at least one~~ spring element and ~~at least one~~ pair of internal lugs on the skirt and extending radially inwardly from the skirt. Each pair of internal lugs ~~on the skirt~~ includes a first lug that cooperates with the stop lug on the container finish to prevent unthreading of the closure from the finish absent pressure on the closure against the spring element to push the first lug ~~on the skirt~~ beneath the corresponding stop lug on the container finish, and a second lug circumferentially spaced from the first lug that cooperates with the stop lug ~~on the container finish~~ to prevent ~~"over-threading" or~~ over tightening of the closure on the finish.
